

INTERNSHIP PROJECT REPORT

Student Exam Performance Prediction System

Name: Yubraj Mahato
Role: Data Analyst Intern
Date: 2026

1. Introduction

This project develops a machine learning system to predict students' math scores using demographic and academic data. It includes preprocessing, model training, and deployment via a web application.

2. Objective

To build a reliable system that predicts student performance and provides real-time predictions through a user-friendly interface.

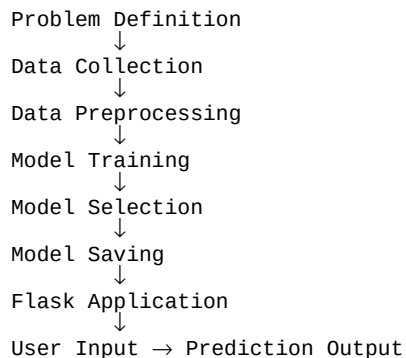

3. Problem Statement

Institutions lack tools to predict student performance early. This project solves that by using machine learning to estimate math scores.

4. Tools & Technologies

Python, Flask, Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Seaborn.

5. Project Workflow

6. Results

The system successfully predicts student performance and provides real-time outputs via web application.

7. Conclusion

This project demonstrates an end-to-end ML solution and practical implementation of data science concepts.
